

# Jinyeop Song

Ph.D. Candidate in Physics and Statistics ·

☎ (+1)617-949-1042 | ✉ yeopjin@mit.edu | 🏠 <https://jinyeop3110.github.io> | ❤ Boston, MA, USA

## Education

### Massachusetts Institute of Technology (MIT)

Ph.D. Candidate in Physics and Statistics - GPA: 4.35/4.5

Supervisor: Jeff Gore

Cambridge, MA, USA

Aug 2020 - June 2026 (Expected)

### Korea Advanced Institute of Science and Technology

B.S. in Physics (Major) and Math (Minor) - GPA: 4.16/4.3 (Summa Cum Laude)

Daejeon, Korea

Mar 2014 - Jun 2020

## Research Interests

With a strong expertise in *ML* and *Physics*, I am interested in:

**(1) AI for Science** : building LLM-agent systems [3], biological foundation models [7], and high-quality benchmarks [4] to accelerate scientific breakthroughs.

**(2) Foundations of LLMs** : exploring pretraining scaling laws [8,9], reasoning[5], agentic evaluation framework [2], and RL for tool-use [1] to make intelligent LLM systems.

## Professional Experience

### MIT-IBM Watson AI Lab

Research Intern (Summer)

Cambridge, MA, USA

2025

- Developed a knowledge-graph-augmented RAG framework for LLMs using multi-turn reinforcement learning (RL), achieving state-of-the-art accuracy with 47% lower generation cost and 6% higher transferability compared with prior methods.

### Machine Learning Alignment and Theory Scholars

Research Fellow

Berkeley, CA, USA

2025

- Proposed a novel, goal-agnostic evaluation framework for LLM agents using the information-theoretic measure (i.e empowerment : mutual information between actions and future states).

### MIT

Graduate Research Assistant (PI: Prof. Jeff Gore)

Cambridge, MA, USA

Feb 2021 - Present

- Explored emergent phenomena (e.g., neural scaling behaviors, in-context learning) in LLMs, linking theories with empirical results.
- Developed a foundation model for human methylation data that predicts patient aging and chronic disease.
- Explored how interspecies interaction strength shapes the merging of two microbial communities using experiments and simulations.

### Samsung Electronics Research

Research Intern (Summer)

Suwon, Korea

2020

- Investigated post-quantum cryptography (lattice-based encryption methods) for use in DRAM products.

### Harvard-MIT Health Sciences and Technology

Research Intern (Summer)

Boston, MA, USA

2019

- Developed a neural connectome reconstruction algorithm that maps brain images into 3D space.

### KAIST

Undergraduate Research Assistant

Daejeon, Korea

Jul 2014 - Aug 2020

- Biomedical Optics (PI: Prof. YongKeun Park): developed deep-learning algorithms for 3D time-lapse tracking of CAR-T cells; built classification models using 3D refractive-index maps for rapid pathogen identification.
- Chromatin/Protein Engineering (PI: Prof. Wonki Cho): implemented thermodynamic simulation code for multivalent antibody binding.
- Quantum & Nanophotonics (PI: Prof. YongHoon Cho): investigated exciton-polariton coupling in GaN nanoporous DBR cavities.

## Publications

## Awards and Honors

2025	<b>Scholarship:</b> “Machine Learning and Theory Scholarship(MATS)”
2023	<b>Scholarship:</b> “Mokam Research Scholarship”
2016	<b>Fellowship:</b> “KAIST Presidential Fellowship (KPF)”
2023	<b>Award:</b> “2020 KPS Best Oral Presentation Award”
2020	<b>Honorary Title:</b> “Excellent Graduate of KAIST”
2014 - 2020	<b>Scholarship:</b> “Korea Presidential Science Scholarship”

## Teaching & Extracurricular Experiences

2024 - 2025	<b>Organizer:</b> AI Weekly Journal Club in Physics of Living Systems	MIT
2023	<b>Teaching Assistant:</b> “Complex Systems Biology”	MIT
2015 - 2018	<b>Freshmen Tutoring Program</b>	KAIST

## Skills

<b>Programming</b>	Python, Matlab, R, Github, Torch, and Cuda
<b>Languages</b>	English(Fluent), Korean(Native), Chinese(Elementary)
