Education

Massachusetts Institute of Technology (MIT)

Ph.D. Candidate in Physics and Statistics - GPA: 4.8/5.0

Supervisor: Jeff Gore

Cambridge, MA, USA

Aug 2020 - June 2026 (Expected)

Korea Advanced Institute of Science and Technology (KAIST)

B.S. in Physics (Major) and Math (Minor) - GPA: 4.16/4.3 (Summa Cum Laude)

Daejeon, Korea

Mar 2014 - Jun 2020

Research Summary & Interests

I research how to make LLM agents more capable, reliable, and understandable—bridging RL, multi-agent systems, and principled evaluation. Publications at ICML (Spotlight), NeurIPS workshops, *eLife*, and *Nature Methods* (under review).

(1) **Multi-LLM Agent System** (Proposed): developing practical RL methods to jointly tune multiple models/agents with distinct roles (e.g., *solver* and *validator*), inspired by ecological and evolutionary dynamics. [\[Proposal\]](#)

(2) **Science of LLMs**: investigating neural scaling laws [9, 10] and in-context learning mechanisms [6]—foundational insights for agent design.

(3) **LLM Agent Foundations**: building evaluation frameworks grounded in information theory [3, 5] and RL-based tool-augmented reasoning such as knowledge-graph RAG [2] and molecular design [4].

Professional Experience

IBM Research – Watson AI Lab

Research Intern

Cambridge, MA, USA

2025

- Developed a knowledge-graph-augmented RAG framework for LLMs using multi-turn reinforcement learning (RL), achieving state-of-the-art accuracy with 47% lower generation cost and 6% higher transferability compared with prior methods.

Machine Learning Alignment and Theory Scholars

Research Fellow

Berkeley, CA, USA

2025

- Proposed a novel, goal-agnostic evaluation framework for LLM agents using the information-theoretic measure (i.e., empowerment: mutual information between actions and future states).

MIT

Graduate Research Assistant (PI: Prof. Jeff Gore)

Cambridge, MA, USA

Feb 2021 – Present

- Explored emergent phenomena (e.g., neural scaling behaviors, in-context learning) in LLMs, linking theories with empirical results.
- Developed a foundation model for human methylation data that predicts patient aging and chronic disease.
- Explored how interspecies interaction strength shapes the merging of two microbial communities using experiments and simulations.

Samsung Electronics Research

Research Intern

Suwon, Korea

2020

- Investigated post-quantum cryptography (lattice-based encryption methods) for use in DRAM products.

Harvard–MIT Health Sciences and Technology

Research Intern

Boston, MA, USA

2019

- Developed a neural connectome reconstruction algorithm that maps brain images into 3D space.

KAIST

Undergraduate Research Assistant

Daejeon, Korea

Jul 2014 – Aug 2020

- Biomedical Optics (PI: Prof. YongKeun Park): developed deep-learning algorithms for 3D time-lapse tracking of CAR-T cells; built classification models using 3D refractive-index maps for rapid pathogen identification.
- Chromatin/Protein Engineering (PI: Prof. Wonki Cho): implemented thermodynamic simulation code for multivalent antibody binding.
- Quantum & Nanophotonics (PI: Prof. YongHoon Cho): investigated exciton–polariton coupling in GaN nanoporous DBR cavities.

Awards, Extracurricular & Skills

Awards

MATS Scholarship (2025), Mokam Research Scholarship (2023), Korean Physical Society Best Oral Presentation Award (2020), Asan Foundation Biomedical Science Scholarship (2021–2025), Excellent Graduate of KAIST (2020), KAIST Presidential Fellowship (KPF, 2016), Korea Presidential Science Scholarship (2014–2020)

Extracurricular

2024 - 2025	Organizer: AI Journal Club	MIT
2023	Teaching Assistant: “Complex Systems Biology”	MIT
2015 - 2018	Freshmen Tutoring Program	KAIST

Skills

Programming: Python, Matlab, R, Github, Torch, Cuda | **Languages:** English (Fluent), Korean (Native), Chinese (Elementary)
